Listing of Claims

Claims 1-14 (canceled)

15. (Currently Amended) A method for video object monitoring with a mobile communication system, wherein for transmitting video data via the mobile communication system a connection is set up between a transmitter provided with a video camera and at least one receiver, the method comprising the steps of

before or while the connection is set up, checking by a device of the mobile communication system if the receiver is authorized to receive video data from the transmitter, and

checking that a subscriber relationship (8, 9) of the mobile communication system and/or a temporary IP address is associated with a corresponding transmitter and receiver, wherein the two subscriber relationships and/or the IP addresses are linked in a database of the operator (11) of the mobile communication system, and

checking ~~that an~~ authorization of the receiver for receiving the video data from the transmitter, based on the linked data.

16. (Previously Presented) The method according to claim 15, further comprising steps of storing information about an international mobile subscriber identification (IMSI) and/or a mobile subscriber telephone number (MSISDN) and/or an IP address assigned to the transmitter and the receiver in the database.

17. (Currently Amended) The method according to claim [[1]] 16, further comprising a step of setting up a connection between transmitter and receiver by dialing the associated mobile subscriber telephone number (MSISDN) or an IP address.

18. (Currently Amended) The method according to claim [[1]] 15, further comprising the step of storing routing rules for transmitting video data between the transmitter and receiver in the database.

19. (Currently Amended) The method according to claim [[1]] 16, further comprising the step of requiring a corresponding subscriber identification module SIM (5, 6) of the mobile communication system for operating the transmitter and the receiver.

20. (Currently Amended) The method according to claim [[1]] 19, further comprising the step of controlling access to the mobile communication system in the form of an identification and authentication of the transmitter and the receiver based on the data stored on the subscriber identification module (5, 6).

21. (Currently Amended) The method according to claim [[1]] 15, further comprising the step of setting up a connection or transmitting data only upon a request from the transmitter and/or the receiver.

22. (Currently Amended) The method according to claim [[1]] 15, further comprising the step of setting up a connection or transmitting data between transmitter and receiver only based on a triggering event.

23. (Currently Amended) The method according to claim [[1]] 15, further comprising the step of transmitting audio data and/or data from sensors located on the transmitter-side in addition to the video data.

24. (Currently Amended) The method according to claim [[1]] 15, further comprising the step of implementing the mobile communication system as a GSM or UMTS mobile communication system.

25. (Currently Amended) The method according to claim [[1]] 15, further comprising the step of

transmitting the video data in form of transmission protocols that are standardized for use in the mobile communication system .

26. (Previously Presented) A device for video object monitoring with a mobile communication system, comprising

a transmitter provided with a video camera for recording video data,

at least one receiver capable of receiving the video data,

the mobile communication system for transmitting the video data between the transmitter and the receiver,

a database connected to the mobile communication system for storing data that identify the transmitter and the receiver, and

a device (10) for checking, based on the data stored in the database, if the receiver is authorized to receive the video data from the transmitter.
